Art Unit: 1644

RESPONSE TO APPLICANT'S AMENDMENT

1. Applicant's submission filed on 09/18/09 has been entered.

2. Claims 1-30 are pending.

Claims 11-30 stand withdrawn from further consideration by the Examiner, 37 C.F.R. § 1.142(b) as being drawn to a nonelected invention.

Claims 1-10 read on a method of identifying a compound capable of modulating Fcγ receptor signaling pathway are under consideration in the instant application.

3. The rejection of claim 1-10 under 35 U.S.C. 102 (e) as being anticipated by WO 03/074652 as is evidenced from the instant Specification on pages 13, paragraph 0041 and 31, paragraph 0096 and Takizawa et al. (J. Exper. Med. 1992, vol. 176, pages 469-476), is hereby withdrawn in view of the amendment to claim 1. However, this rejection will be re-introduced when the **new matter** (contacting mast cell with IgG ; cross-linking said IgG in the presence of a candidate compound) is deleted from claim 1.

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 1-10 stand rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. **This is a New Matter rejection.**

“ contacting mast cell with IgG ; cross-linking said IgG in the presence of a candidate compound” claimed in the amended 1 represent a departure from the specification and the

Art Unit: 1644

claims as originally filed. The passages pointed by the applicant do not provide a clear support claimed in amended claim 1 “contacting mast cell with IgG ; cross-linking said IgG in the presence of a candidate compound”. For example, on overlapping pages 13-14, the Specification generally disclose that “other cells containing Ig E and IgG receptors, such as basophile cells, may be also subjected to priming step. Similarly, overlapping pages 18 -19 only disclosed the general knowledge that “typically, receptor crosslinking and corresponding activation of the signaling cascade is achieved by combination of an IgG antibody and a cognate anti-IgG antibody capable of crosslinking the receptor bound IgG molecule.

The specification and the claims as originally field only support “contacting at least one IgE prime mast cell with a candidate compound in the presence of Fcγ receptor signaling activation”.

Applicant’s arguments, filed 09/18/08 have been fully considered, but have not been found convincing.

Applicant asserts that Specification on page 32, paragraph 99 provided a support for the amended claim 1.

Contrary to Applicant’s assertion, the passage on page 32, paragraph 99 make no mention of the mast cells that are contacted with IgG as recited in the amended claim 1.

6. No claim is allowed.

7. THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
